POTENTIAL HEALTH EFFECTS: This section includes possible adverse effects, which could occur if this material is not handled in the recommended manner.

EYE: May cause moderate eye irritation with corneal injury.

SKIN: Essentially non-irritating to skin. A single prolonged exposure is not likely to result in the material being absorbed through skin in harmful amounts. The LD$_{50}$ for skin absorption in rabbits is >2000 mg/kg. Did not cause allergic skin reactions when tested in guinea pigs.

INGESTION: Single dose oral toxicity is moderate. Small amounts swallowed incidental to normal handling operations are not likely to cause injury; however, swallowing larger amounts may cause serious injury, even death. The oral LD$_{50}$ for rats is 488 mg/kg.

INHALATION: Single exposure to dust is not likely to be hazardous. The LC$_{50}$ for rats is 4.84 mg/l for 4 hours (particulate aerosol).

SYSTEMIC (OTHER TARGET ORGAN) EFFECTS: Effects have been reported in the following organs: blood, kidney, and pancreas.

CANCER INFORMATION: Tebuthiuron did not cause cancer in laboratory animals.

TERATOLOGY (BIRTH DEFECTS): Birth defects are unlikely. Exposures having no adverse effects on the mother should have no effect on the fetus.

REPRODUCTIVE EFFECTS: Tebuthiuron did not interfere with reproduction in animal studies.

4. FIRST AID:

EYES: Irrigate with flowing water immediately and continuously for 15 minutes. Consult medical personnel.
